- Prepared food for customers.
- Performed food prep when needed and organised inventories.
- Gained experience in a fast place environment.
- Learned how to follow correct procedures.

Personal Projects

- **Happiness web app –** A client-server application to view world happiness data. The frontend was written in React with JavaScript. A RESTful API was built with the use of Node to fetch and send responses to the client.
- **Conway's Game of Life –** A web application based on Conway's game of life simulation. This was built in react with the use of hooks to manage the state of the cellular automation.
- **Inventory system –** A console-based inventory management system developed in c#. This project taught me the fundamentals of object orientated programming and data storage.
